

# Case Rubric

Course: Management Information Systems (MIS)

Instructor: Suresh L. Paul

2026-08-20

## Overview

This document tells you exactly what is expected of you for the final presentation including how every point will be awarded. Read it carefully as a team to discuss strategy and division of labor before you begin your case.

Remember, we are not summarizing the case we are analyzing the case. While facts of the case needs to be summarized, they are not the end game. Your job is to think like a management information system consultant who has been handed a real crisis and asked: What happened, why did it happen, what did it cost, and what should never happen again?

## Deliverables at a Glance

| Deliverable  | Length                 | Format Options                                | Weight             | Overall Weight      |
|--------------|------------------------|-----------------------------------------------|--------------------|---------------------|
| Presentation | 10–30 slides (20 mins) | PowerPoint (.pptx), PDF, Quarto, LaTeX, Canva | 100% of case grade | 30% of course grade |

**Team Appendix Required:** Submit a detailed contribution log with your presentation listing each team member's specific contributions (slides created, research conducted, visuals created). Every member must be prepared to answer questions on any part of the case during the presentation.

**AI Research Policy:** AI tools may be used, alongside reputable academic/library sources, to research the case study. All AI-assisted research must be documented: maintain a record of AI conversations (what query was asked and what answers were obtained) and chat logs in Google Slides (or Google Docs or Google Sheets for drafting) with version history enabled, and share the version history link upon request.

**AI Writing Policy:** AI tools may not be used to generate written content for the presentation slides or speaker notes — including bullet points and talking points. Slide content you cannot explain during the presentation, generic infographics that do not fit your narrative, or data that does not support your argument may adversely affect your grade. Use Google Slides (or Google Docs or Google Sheets for drafting) with version history enabled; share the version history link upon request.

## Required Structure — Presentation

Your presentation must be structured to tell a compelling story, not just report information. The suggested flow is:

1. **Hook:** Open with the most dramatic or counterintuitive fact from the case (1–2 slides)
2. **Company & Systems Overview:** Who they are; how technology is central to their operations (2–3 slides)
3. **The Incident:** What happened, timeline, key decisions (3–5 slides)
4. **Root Cause Analysis:** Why it happened; MIS framework application (2–3 slides)
5. **Damage Assessment:** Quantified impact across stakeholders; visuals required (2–3 slides)
6. **Broader Implications:** What this means for IT, cloud, and AI (2–3 slides)
7. **Recommendations:** Specific, prioritized, actionable (2–3 slides)
8. **Key Lessons:** Transferable principles (1–2 slides)
9. **Q&A Prompt Slide:** Pose one provocative question to the audience (1 slide)

*Note: Visual requirement: Your presentation must include at least one original chart, diagram, or infographic not copied from the case reading. Options include: timeline of events, systems architecture diagram, stakeholder impact matrix, cost breakdown chart, or before/after comparison table.*
